

## Airbrush Spray Tan Guidelines

Please Read and understand The following:

- If you have sensitive skin or allergies to sunless tanning products containing DHA or have food allergies, we strongly suggest consulting your physician prior to spray tanning.
- Our solution does not provide any UV protection. Use SPF protection as usual.
- Be advised that a small percentage of people have skin that does not react favorably to spray tanning. For this reason, we highly advise doing a trial spray tan when your appearance is critical.
- If you are pregnant or nursing, we recommend that you consult with your physician before receiving a spray tan application.

### BEFORE YOUR TAN

**PREPARATION:** Exfoliate well with an oil free body wash and cloth. Do not use oil scrubs. Oil creates a barrier, and your tan will not process well. Waxing is required to be done 48 hours prior to tanning and shaving is required 24 hours prior to your spray tan session for optimal processing results.

### DAY OF TAN

**DAY OF APPOINTMENT:** Your skin should be free of: make up, deodorant, sweat, fragrances, lotions, jewelry and should be cleaned in accordance with the instructions mentioned above. If inclement weather, please dress accordingly to cover your skin (long pants and a long sleeve shirt) and bring an umbrella.

**ARRIVE TO YOUR APPOINTMENT:** Please dress properly by wearing LOOSE fitting clothes (no leggings ) and open toe shoes ( flip flops or sandals. ) If you attend your appointment without proper preparation or attire, Richmond Make Up Artist, LLC cannot guarantee satisfactory results. During your spray tan session, women may dress down to their comfort level. We will provide disposable undergarments upon request free if charge.

### AFTER YOUR TAN

**POST CARE FOR SPRAY TAN:** For optimal results, wait the recommended time for the spray tan that you received. You will be reminded of your time frame at your appointment. For a Rapid Spray Tan, you rinse after 4 hours and the Original Spray Tans rinse after 8 hours.

**AVOID ANY ACTIVITIES THAT WILL CAUSE PERSPIRATION, MOISTURIZING YOUR SKIN OR APPLYING MAKE UP UNTIL AFTER YOUR FIRST SHOWER.**

Your first shower: You will see the immediate bronzing color wash off your skin - this does not affect your spray tan. Rinse with no soap and warm water and pat and dry with a towel. Moisturize your skin after your first shower and wait 24 hours before using body wash. Moisturize Daily. Products must be sulphate-free for the best results. We recommend using products solely for spray tanning that are offered at the studio.
